Big Question: Why are my senses so important?		

The 5 senses				
Hearing	Sight	Touch	Smell	Taste
				
Ears	Eyes	Fingers, hands, feet	Nose	Tongue

We have 5 different senses and they tell our bodies about things around us by seeing with our eyes, hearing sounds with our hears, tasting with our tongue, smelling with our noses and touching with our skin usually on our fingers, hands and toes.

The tongue tells your brain what different food or drinks tastes like. There are 4 different tastes

- bitter
- sour
- salty
- sweet

Each part of the human body has a name

Our senses can help us know when we might be in danger e.g smelling something burning or feeling if something is too hot and will burn our hands.
